

# Ultimate Genetics, LLC is proud to announce that **Advantage Technology Embryo Armor™** is now commercially available through embryo transfer technicians across the United States.

Advantage Technology Embryo Armor™ is a dynamic new discovery in bovine embryo transfer that improves reproductive efficiency in both in vivo and in vitro applications.

This technology has been proven by researchers at the University of Tennessee Research Foundation through comprehensive research and field trials to substantially increase pregnancies established with fresh and frozen embryos.

To find out more about this incredible break through in pregnancy rates or to find a participating practitioner please visit [www.ultimategenetics.com](http://www.ultimategenetics.com).

## Embryo Armor™

A Product from Ultimate Genetics

Advantage Technology Embryo Armor™ Increases Pregnancy Rates from Frozen and Fresh Embryos

These data are a compilation of 16 separate experiments utilizing Advantage Technology Embryo Armor™ in a double blind study to compare pregnancy rates of treated embryos to control, non-treated embryos. 301 embryos were flushed from cows treated with Advantage Technology Embryo Armor™ and frozen prior to transfer to recipient cows, and were compared to 253 control frozen embryos. The difference between treated embryos and non-treated embryos was 13% in favor of treatment. 768 embryos were flushed from cows treated with Advantage Technology Embryo Armor™ and transferred fresh to recipient cows, and were compared to 412 control embryos. The difference between treated embryos and non-treated embryos was 10% in favor of treatment.
